

ABSTRACT OF THE DISCLOSURE

5 A flange for connecting a fan to a manway which enables the extension of
lines from the exterior of the manway through the manway having the fan attached
thereto, the flange having a top plate for connecting the flange to the fan, the top plate
having a generally circular opening in the center thereof, a bottom plate for connecting
the flange to the manway, the bottom plate having a generally circular opening in the
10 center thereof, and a hollow sleeve having a cylindrical wall terminating in two
generally circular ends, one of the two ends being connected to the bottom plate at the
periphery of the opening in the bottom plate, and the other of the two ends being
connected to the top plate at the periphery of the opening in the top plate, the sleeve
having at least one opening in the wall for receipt of the lines.
